time spans → discrete periods of history

pre-construction

construction

modification/renovation

final → everything after/abandonment

Time span	Activity	construction units	strata	features	lots

(stick to nonsense names until final final notes)

D, E = pre-construction

layer on top of C = feature 1

C = own time span, after construction but predates abandonment

New construction in B = modification

A = post-construction, abandonment

Next describe strata

stratum Σ : time span &

describe color, texture, compaction, inclusions, artifacts, thickness of layer (or exposed thickness), slope, relationship to other strata, etc.

(Include relationship to C.U.s and features as well)

describe C.U.s in appropriate time span

- relationships ~~was~~ between construction units
- functions of C.U.s
- describe total structure
 - ↳ number of walls
 - ↳ orientations
 - ↳ room numbers
 - ↳ anything that can be inferred
- pull everything together to make sense of what you have found

2 Feb 2004, Micha Pino

PO4-62-1

Today is our first day in the field. We left around 7:00am and it is now 10:40am. Nicole Burkhardt is my excavation partner and we have chosen structure #66 near the North end of the site. We have seen a few examples of how to begin trench layout and are now waiting for someone to come by and help us begin ours. Although there are some clouds and a bit of a breeze I am still having some trouble with the heat. I am having some doubts about full days in the hottest season but hopefully I will be more used ~~used~~ to the sun by then. Our structure seems to have one obvious wall on the northeast side, but we are going to dig our trench perpendicular to the other walls in the NW to SE direction to avoid interference with another structure. The site is 202 and our subops ^{are} ~~is~~ DK and DL.

3 Feb 2004, Micha Pino

PO4-62-2

Trench = 142° SW (orientation of DK).
The weather this morning is cool
and there is a breeze. Nicole and I
have finally set up all the stakes
for our trench and outlined it
with string. We need to set up our
datum next.

Datum: SW corner = 40 cm
SE corner = 39 cm
NE corner = 41 cm
NW corner = 41.5 cm } DL

~~103 cm from primary datum~~ NE corner = 44 cm
~~82 cm from primary datum~~ NW corner = 37.5 cm
SE corner = 42 cm
SW corner = 45.5 cm } DK

remeasured
↓ from second
datum pt @ same
elevation

Above measurements are for excavation
unit 1 in each DK and DL.

202 DK/001 begins 44 cm below datum
in the NE corner of excavation unit 1,
and goes to 64 cm below datum.

My workers are ~~Chabelo~~ Chabelo and
Ruben Rodas.

3-Feb 2004, Micha Pino

P04-62-3

OP 202DK/001: This lot was excavated ~~between~~ 44 - 64 cm ^{below datum} (measured from NE corner of excavation unit 1).

The soil is a dark brown with dry clumps and small roots.

Dry, basic topsoil

Chabelo and Ruben did not dig the lot evenly so I am extending the lot to 20 cm deep.

They have found very little sherds and no other artifacts.

Old Man Ruben is new at this and got a little carried away with the pick ax. I asked him to dig slower and more carefully.

Chabelo seems to know what he is doing and took the ax away from Ruben.

At the base of lot 001 there is a large rock in the SW corner that is still imbedded. It appears to be tumble. There is a partially uncovered pottery sherd in the south wall of the lot. I believe it will be excavated in the next lot.

End of lot 001 datum: NW=60 cm, NE=64 cm, Center=67 cm, SW=59.5 cm (on top of rock), SE=63 cm

3 Feb 2004, Micha PIND

P04-62-4

After measuring final datum points I decided to ask the guys to level out the lot a bit more. I hope to have the points all close to 67 cm from the datum.

The guys removed the larger piece of pottery from the soil and there is nothing terribly significant about it.

After leveling out I remeasured and the points are all about 64 cm from the datum.

Anna had helped me measure the last points so I'm not sure why there is this inconsistency, but I believe that 64 cm for each point is accurate.

TOMORROW I will begin excavating lot 002.

Lot 001 yielded a few sherds and a couple red rocks, most likely chert. There may also be a small piece of quartz.

4 Feb 2004, Michal PINO

P04-62-5

This morning is starting off hotter than yesterday, and I think I should have brought more water, but I'll be okay. Lot 1 has been completed and I am excited to move on to lot 002.

Excavation unit 1 is pretty far removed ~~&~~ from the structure so I don't think we'll find too much, but we will see.

I am remeasuring the bottom of lot 001 to remove any inconsistencies.

SW = 59.5 cm below datum (on top of rock, at deepest point on rock)

NW = 63.5 cm BDP

SE = 66 cm BDP

NE = 64 cm BDP

Ruben and Chabelo have begun digging lot 002 and are sorting out sherds from the dirt. I am going to make sure that they go more slowly and carefully today.

Lot 002 should be 64-74 cm

BDP measured from the NE corner.

It is 20-30 cm BGS.

I have drawn a simple picture of ops DK and DL (the 11 meter trench) so I can begin an abstract drawing of our structure (66).

4-FEB 2004, MICHA PINO

PO4-62-6

A piece of pottery from lot 002 has caught my eye because it looks a bit different from the rest. It seems to be in 2 layers, with the red clay broken in half by a black line.

Chabelo has found a bigger piece of the same material and believes they are from the same pot.

The bigger piece is imbedded in the NE wall of the excavation unit 1.

Anna has informed me that this band is caused by the firing temp. being too low to cook the inside of the pot.

Nicole and I dug out the larger sherd and it seems to have a lip on it, so it looks like the top edge of a pot.

Lot 002 is complete. The ^{end} datum for lot 002 are:

NE = 75 cm BDP

SE = 77 cm BDP

SW = 59.5 BPP (rock)

NW = 71 cm BDP

4-FEB-2004, MICHA PINO

P04-62-7

I have asked Chabelo and Ruben to continue on to lot 603, which will be from about 75 cm to 85 cm BDP.

I told them to dig below the rock and if they found other rocks to stop but if it's just dirt that they could pull it out.

The dirt so far has been very hard and is in clumps of hard dry dirt. The consistency has not changed the deeper we go.

Chabelo found an oval clay bead and I put it in the bag with the sherds.

— 3 cm —

bead

He has also just found our first small piece of bajareque.

We have decided to remove the large rock from the SW corner.

Charlie and I do not believe it is in primary context, as small sherds are found underneath.

There is a rounded white object peeking out from underneath the rock and I am excited to uncover it.

04-FEB-2004, MICHA PINO

pot-62-8

We have removed the large rock. It seems to have been solitary, probably tumble. The white object underneath turned out to be a piece of limestone. Better luck next time!!

Lot 003 is pretty much complete. ~~There are~~ I have found some sherds (of course), a couple pieces of bajareque, some interesting rocks, and a lot of dirt.

TOMORROW I will begin lot 004.

Ruben just knocked on the southern wall of excavation unit 1 and believes there is hollow space behind it. I suppose when we get to excavation unit 2 we will check that out.

05 FEB-2004, MICHA PINO

PS4-62-9

It is going to be a hot day!!

I need to measure lot 003 and then begin on lot 004.

Jorge came and took Ruben and now I have a new worker.

SE = 83 cm BDP

NE = 80 cm BDP

SW = 81 cm BDP

NW = 80 cm BDP

Although the corners are a bit shallow Charlie said it would be fine to begin lot 004.

202DK/004 * EU 1 * ^{elev:} 82-92 cm BDP from NE corner

Chabelo has begun digging deeper with the pick axe. I am in a good mood this morning because I finally saw a parrot!

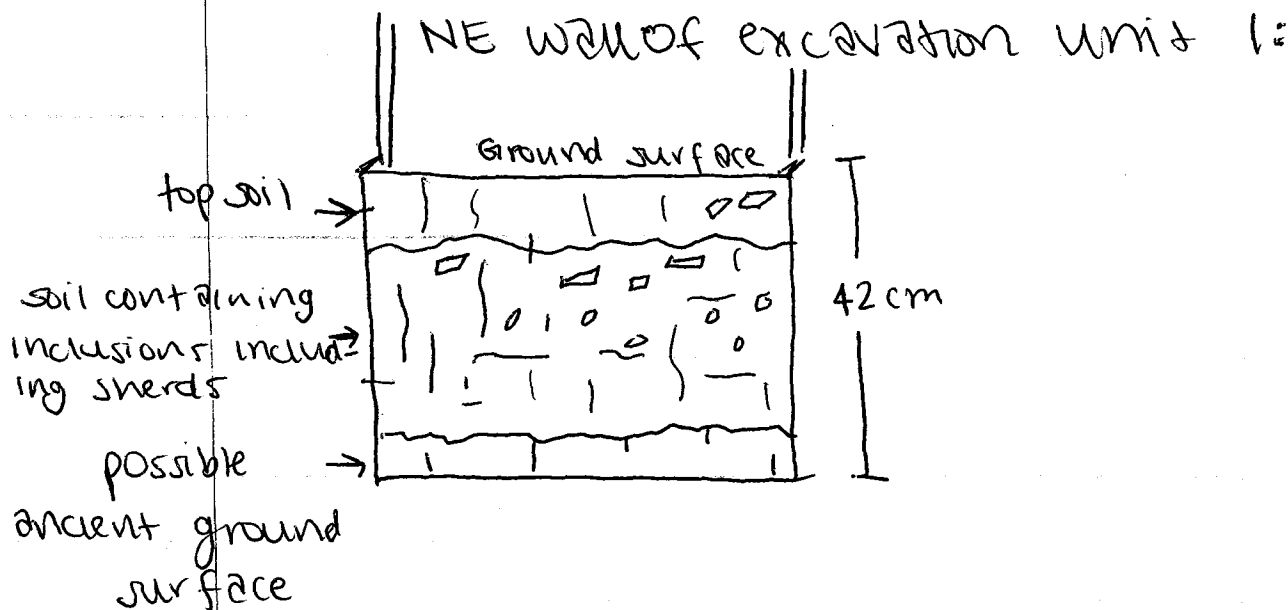

Chabelo has found a small round nodule of clay about 1/2 cm in diameter. He says he thinks it is from a game. It does not appear to be a bead because there is no visible hole for threading.

5-FEB-2004, Micha Pino

POA-62-10

2020K/004

Pat came by with Ed and Ellen and asked me about the stratigraphy of the lot walls. It appears that I have come to the ground surface of the ~~original~~ youngest construction. However I am still finding interesting objects such as part of a pot stand which is evidence of production. We have also uncovered our first piece of obsidian. There appear to be more large rocks on the bottom of lot 004, but I don't think they are more than tumble.

5-FEB-2004, MICHA PINO

PO4-62-11

202DP/004

We have found a line of burnt clay intact in the Northern wall of excavation unit 1, 42 cm BGS.

Ed told us to go ahead and continue with lot 004 and see what else shows up. There are a lot of small rocks at the base of the incomplete lot so it could be a floor.

As we have continued digging we have found a small bone about 2 cm in length. I believe this could be significant because of the depth at which it was found. We have also found what appears to be a small handle.

05-FEB-2004, MICHA PINO

P04-62-12

202DK/004

Lot 004 is almost complete. We are still finding sherds and possibly shaped rocks. ~~###~~ Although we have found the burnt clay which may represent a floor, we are finding artifacts below that level.

Lot 004 has yielded the most artifacts yet, including a piece of a pot stand, shaped rocks, a burnt clay floor, and a tiny clay ball. Tomorrow we will continue on to lot 005, and after that hopefully on to excavation unit 2.

06-FEB-2004, MICHAE PIMO

P04-62-13

202 DK/005 EU 2

46cm BDP - 66cm BDP

I am going to open EU 2 so that the guys have more room to dig. I will probably return to EU 1 later to go deeper.

EU 2 measurements: (lot 005)

NE corner = 46 cm BDP

This lot may be either 10 or 20 cm deep, depending on what we find.

Charlie suggested that if we don't find much in the first 10 we could extend it down to 20 since lot 001 in EU 1 was 20 cm deep anyway.

The soil here is dark, hard topsoil with a lot of little roots.

Ruben is digging around some rocks in the eastern side of the lot. I will have to see if they are in any sort of pattern.

We have a herd of cattle down the hill and I am enjoying their sounds and company. The sun, on the other hand, is already feeling strong. We are a bit late this morning because Ellen had to get gas on the way in.

6-FEB-2004, MICHA PINO

P04-62-14

202DK/005 EU 2

I have asked the guys to leave the rocks in place until we get down to 20 cm BGS to see if anything develops. If not I will remove them because they are most likely tumble.

I have pulled some rocks out and Ed has suggested that I leave a few that could be significant and draw them to scale.

Lot 005 is now complete.

202DK/006 EU 2

66 cm to 76 BDP from NE corner
20-30 cm BGS

The soil in lot 006 is darker and richer than the previous but still very hard. Chabelo and Ruben are removing all small rocks but leaving the two that I have drawn.

It is time to pack up so I will have to continue lot 006 on Monday.

9-FEB-2004, Micha Pino

PO4-62-15

202DK/006 EU 2

It has rained this weekend and the site is pretty muddy. We had car trouble coming in due to the mud, and I think the workers' truck is still dead on the road in.

I am feeling sick and depressed this morning, I'm not sure why. This seems to be a point in the trip when everyone is getting mad at each other.

I am going to ask Chabelo and Ruben to finish digging lot 006.

Chabelo showed me a cut on his leg and said it was from the car. I guess he must have been hit by a rock or something while pushing it.

9-FEB-2004

~~202DK/006~~ MICHA PINO

P04-62-15

202DK/006 EU2

feature The drawing on page P04-62-15 shows a possible wall. This wall or ~~structure~~ will be named "Prospero". I have asked the guys to continue on to lot 007, which is oddly shaped due to the structure. (See P04-62-15).

202DK/007 EU 2

This lot is 76-86cm ~~BDP~~ BDP from NE corner (30-40 cm BGS).

Once this lot is complete units 1 and 2 will be the same depth, or thereabouts. Pat and Ed believe I should return to EU1 and go deeper.

I have taken out the 2 most northern rocks because they were at a higher elevation and most likely tumble. Now that they have been removed, a wall line seems more apparent.

9-FEB-2004, Micha Puno

PO4-62-17

202DK/008 EU 1/2

lot 008 is going to be all of ~~the~~ unit 1 and the part of unit 2 that is not part of Prospero.

lot 008 is going to be 92-102cm BDP from the NE corner (48-58cm BG5)

I am going to rest in the shade while the guys finish up lot 008.

The lot has been finished, and Anna and I sent the guys to go clear the other site because I need to rest in the shade until lunch.

We pulled out a pretty substantial amount of ceramics from below the burnt clay floor so it is quite possible that there was two occupations at this structure.

11-FEB-2004, Micha Pino

P04-62-18

202DK/009 EU 3

40cm BDP from NE corner to 50cm BDP
0-10 cm BGS

Time for my first official full field day. Since I stayed home sick yesterday I seem to be very behind. I am now on my third unit while Nicole has opened six. I don't think it will be hard to catch up.

I'm not feeling very sick anymore except for a cold and extreme tiredness. Hopefully it'll get better as the day progresses.

This lot is a bit shallower than originally intended because of some tumbled rocks.

202DK/010 EU 3

50cm BDP to 70 cm BDP from NE corner
10-30 cm BGS

← tumbled rocks

Because this lot is small we dug 20cm instead of 10cm.

EU 3

NE

lot 010

(10-30 cm BGS)

11-FEB-2004, Michael Pino

PD4-62-19

202DK/011 EU3 (southern half, under
removed tumble)
50-70cm BDP from NE corner
10-30 cm BGS

Chabelo and Ruben have removed
the tumbled rocks and are digging
to the surface of PROSPERO.
Chabelo has found part of what
looks like a figure. It looks
like it could be teeth.

I am going to take a photo of
PROSPERO.

I have found a new feature, which
so far consists of a large, square-shaped
rock which has been perfectly cut.
This feature is named ~~PROSPERO~~.
MALVOLIO.

Once the guys finish up lot 011,
lot 012 will be to dig deeper and
uncover more of MALVOLIO.

11-FEB-2004, MICHA PINO

POA-62-20

202DY/012 EU 3

30-~~50~~ cm BGIS (at NE corner where there is a rock, so it's actually closer to 40-50 cm BGIS where we are digging)
70-80 cm BDP from NE corner

We are finding a lot of sherds in this lot (including the nose of a figurine) and large chunks of well preserved bijareque.

Ellen believes that there may be pieces of the floor because of a flat surface. She also said the nose isn't really a nose.

TOMORROW we will move on to EU 4.

12-FEB-2004, MICHA PINO

I am tired again this morning. I seem to be having some trouble getting to sleep at night. I will have to come up with ways to relax myself.

Today we are going to move on to excavation unit 4. I hope that we can uncover more of MALVOLI.

12-FEB-2004, Miana Pino

P04-62-21

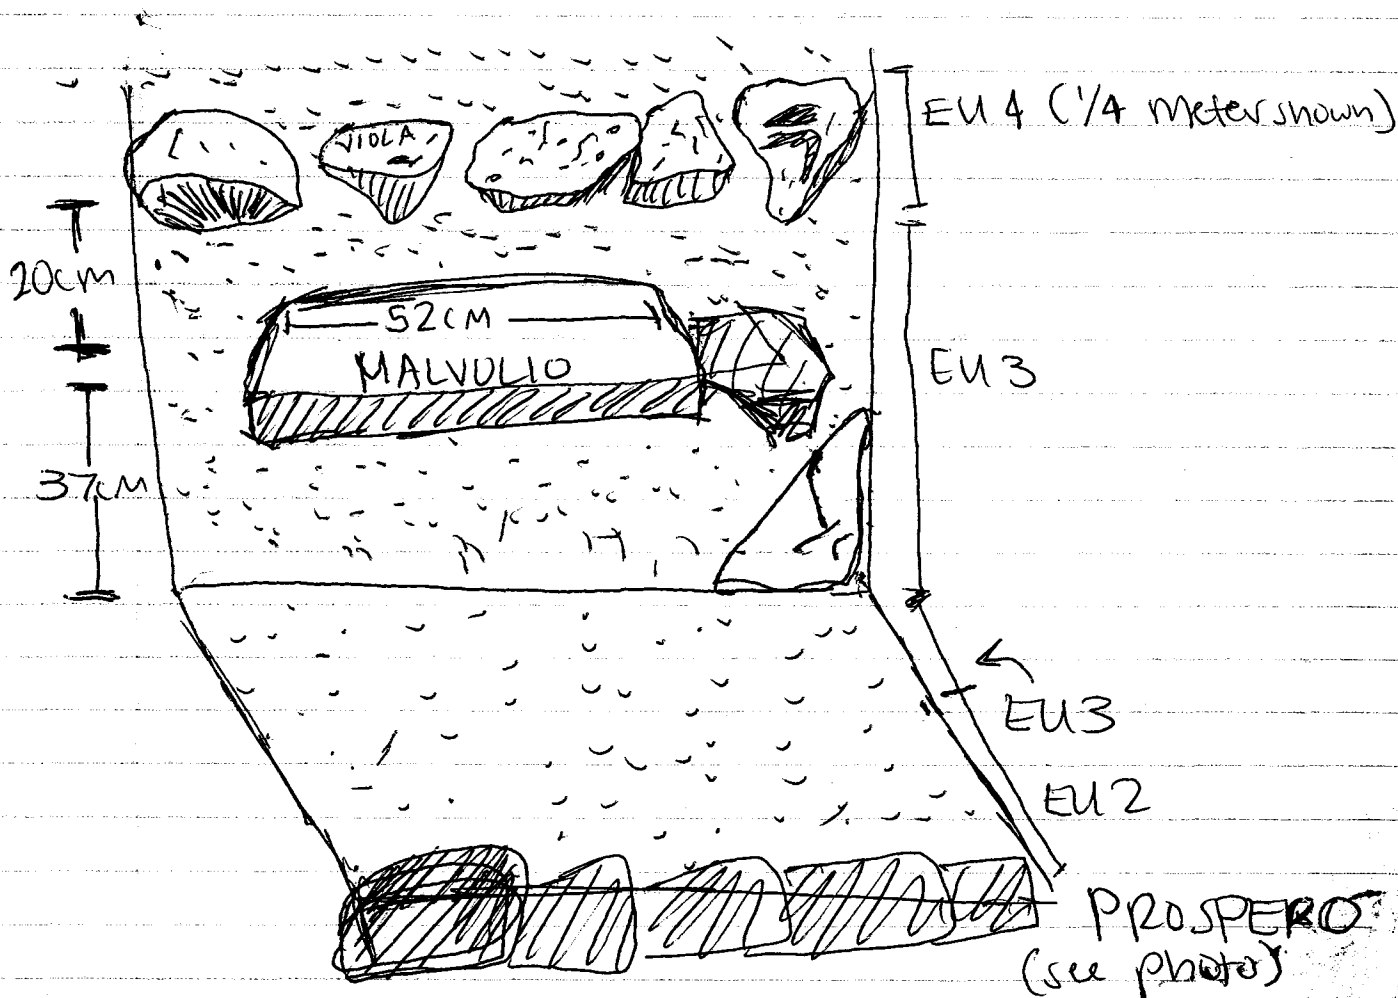

~~202DK/013~~

202DK/013 EU 4

24 cm BDP measured from the NE corner
to 34 cm BDP

0-10 cm BGS

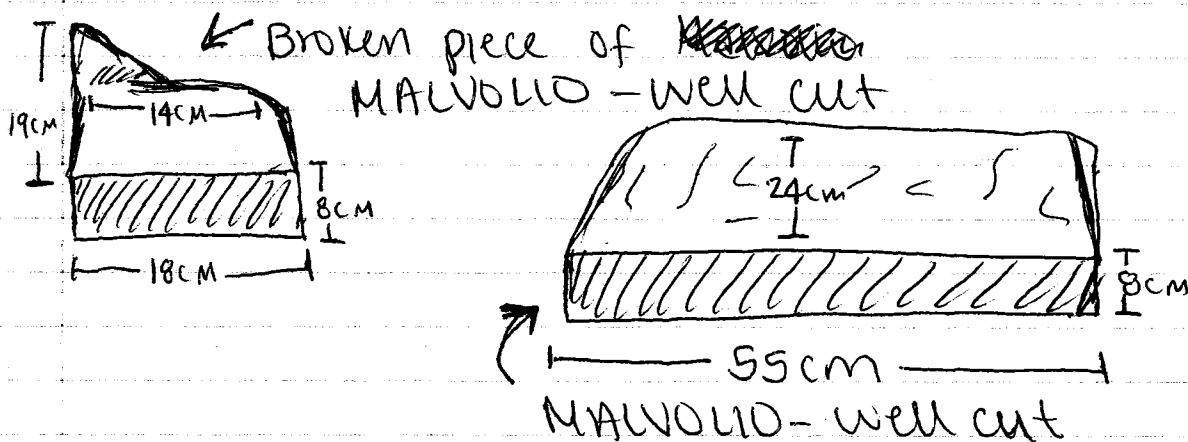

Lot 013 seems to have yielded a
feature above MALVOLIO. MALVOLIO
appears to be a step that leads to
perhaps a doorway.
This feature will be known as
VIOLA.

12-FEB-2004, Micha Pino

PO4-62-22

202DX/013

202DX/014 EU3 southern wall

Lot 014 is a wall-cleaning lot. We are going to scrape around and below MALVOLIO to see what we come up with.

We have uncovered a few more blocks that are nicely cut. There are visible sherds underneath MALVOLIO which could suggest a double occupation.

202DX/015 EU3

81cm BDP - 91cm BDP
measured from NE corner

~50-60cm BGS

We are continuing to dig deeper in EU3 in order to find the back side of PROSPERO.

12-FEB-2004, MICHIA PINO

PO4-62-23

202DK/015 EU 3

lot 015 seems to be from an earlier occupancy. The soil is lighter and has more inclusions. Because there are sherds in a layer below MALUDLO and PROSPERO as well as a rock situated much lower than ~~VIOLETA~~ VIOLETA it is likely that two occupations did occur.

We have found part of a multi-chambered ocarina (according to pat).

202DK/016 EU 4

38-48 cm BDP from NE corner

10-20 cm BGS

This lot is above VIOLETA and will hopefully begin to clarify the features. There are a lot of tumbled rocks in this lot.

12-FEB-2004, Mima Pino

PO4-62-24

202DK/016 EU 4

The guys uncovered either a second feature or another part of VIOLA. I am under the impression that it is probably another part of VIOLA, however it is hard to tell because this feature seems to have a flat edge of its own. I will ask Ed and Pat what they think.

Pat and Ed want me to do an aerial sketch of VIOLA and MALVOLIO and get a photo of them as well.

The new feature is indeed a new wall!! It will be named DUNCAN.

I will now take a photo.

12-FEB-2004, MICHA PINO

PD4-62-25

202DK/017

EU 5

9-19cm BDP from NE corner
0-10cm BG 5

We have started the final excavation unit of DK. This unit is at the peak of the structure, and we should find another feature, I believe.

There appears to be a line up top but the guys have already removed a substantial amount of rocks so I'm not sure.

It is so hot out here, thank god for the breeze!!

13-FEB-2004, MICHA PINO

PD4-62-25

202DK/017

EU 5

This morning we are continuing with lot 017 in EU 5. I am sure by the end of the day my part of the trench will be complete, and probably Nicole's as well. Maybe we will begin our section drawing.

I went and checked out Shannon's burial and am amazed that she recognized it at all! The bones are so tiny and so hard to see!

13-FEB-2004, MICHA PINO

P04-62-26

202DK/018 EUS
19-29 cm BDP from NE corner
10-20 cm BGS

We are continuing with EUS, however we are moving from the south side northwards so as to not disturb the newest feature found in lot 017.

This feature, IAGO, is a small, flimsy line of rocks one line above DUNCAN. We are leaving the Northern Most 20cm of lot 018 unexcavated in order to ensure that IAGO doesn't collapse.

202DK/019 EUS
29-39 cm BDP from NE corner
20-30 cm BGS

We are continuing down in EUS to even it out with ~~202DL~~ 202DL unit 6. We haven't been able to cleanly uncover IAGO - we believe it is just a shallow wall.

lot 019 has yielded another feature consisting of about 5 rounded rocks that are currently visible. It is probably an older feature because the orientation is skewed compared to all the other walls we have uncovered. It will be named RICHARD III.

13-FEB-2004, MICHA PINO

PO4-62-27

2020K/020 EU 5

39-49 cm BDP from NE corner

30-40 cm BGS

The guys are digging behind RICHARD III to clarify the feature. Lot 020 is the southern most 20 or so cm of EU 5.

Lot 020 have revealed that RICHARD III is only one rock layer deep.

I am done with my trench (I think) and have to find Ed or Pat to see what I should do with my workers. I will have to start my final notes soon.

I have sent Chabelo and Don Ruben to find Ed and Pat. They seem a little bitter about having to chop but I have nothing for them to do.

At least there is a breeze and some cloud cover!!

I am going to take photos of DUNCAN, IAGO, and RICHARD III.

16-FEB-2004, Micha Pino

P04-62-28

It's time for final notes!

Unit	exposed Length	exposed Height	Align.	Courses (rows)	top Measure	bottom Measure	width
PROSPERO	1 meter	26 cm 10-26 cm	234°	1-2	61 cm BDP	77 cm BDP	88-100 cm 88 cm
MALVOLIO	54 cm	9 cm	226°	1	51 cm BDP (only one rock)	54 cm BDP	17-23 cm
VIOLETA	1 Meter	24 cm	236°	2	31 cm BDP	36 cm BDP	22-24 cm
DUNCAN	1 Meter	9-14 cm	242°	1	25 cm BDP	31 cm BDP	24-31 cm

18-FEB-2004, MICHA PIND

P04-62-30

UNIT	LARGEST ROCK cm cm	SMALLEST ROCK cm	MODAL SIZE cm	ROCK FORM	MATERIAL/ KIND OF ROCK
PROSPERO	46x40x10	11x10x5	26x26x10	rounded river cobble	
MALVOLIO	53x23x8	—	only one rock	cut rectangular stone	
VIOUA	30x24x9	24x15x8	only 5 rocks	80% rounded 20% cut rect. 4:1	
DUNCAN	27x32x12	19x26x7	only 5 rocks	rounded river cobble	
IAGO	15x16x10	11x10x6	SAME	more or less rounded river cobble	
RICHARD III	37x20x8	can't tell, not all uncovered	can't tell	small, more jagged rounded	

The first construction unit uncovered was PROSPERO in excavation unit 2. PROSPERO is at least 1 meter long and ranges from 10-26 cm in height. It is aligned 234° and consists of one or two courses. The highest point measures 61 cm below datum point (BDP) while the lowest point is at 77 BDP. It ranges from 88-100 cm in width. The rocks were placed with great care, including two large, flat, round rocks which stand out from the rest.

PROSPERO seems to be contemporary with KING LEAR, a burnt clay feature found in the northern most wall of excavation unit 1.

About 37 cm above the base level of PROSPERO, in the next excavation unit to the south is MALVOLIO. MALVOLIO is a carefully shaped rectangular rock measuring 54 cm across.

This rock is solitary and does not appear to be part of a wall. It is most likely a step leading up to the next construction unit. It is 9 cm tall, with an alignment of 226° . It is 17-23 cm in width.

The construction unit above MALVOLIO is named VIOLA. VIOLA is at least one meter in length and is about 24 cm in height. It is aligned to 236° , and consists of 2 courses.

The highest point of VIOLA is 31 cm BDP while the lowest point is 36 cm BDP. It is a fairly small construction, with a width of 22-24 cm. VIOLA leads up to DUNCAN, which is also at least one meter in length. It is a short construction with a height of 9-14 cm and consisting of only one course. It is oriented to 242°. The highest point of DUNCAN is at 25 cm BDP while the lowest is at 31 cm BDP. It is between 24 and 31 cm in width.

DUNCAN most likely led up to RICHARD III, a flat construction at least 54-67 cm in length. RICHARD III does not appear to be aligned with the ~~previous~~ previous units and has an orientation of 257°. It consists of 1-2 courses. The highest point is 26 cm BDP and the lowest point is 27 cm BDP, while it is 40-44 cm in width.

IAGO is the highest and probably most recent construction. It appears that RICHARD III was buried and IAGO added on top of DUNCAN to increase the elevation of the structure. IAGO is a different type of wall than the rest, consisting of smaller rocks and seemingly

made with less care. It is at least one meter in length and ranges from 10-12 cm in height. It is oriented 246° and consists of 2-3 courses of small rocks.

The highest point is at 11 cm BDP while the lowest is at 10 cm BDP. It ranges from 9-14 cm in width.

18-FEB-2004, Micha Pino

P04-62-31

Nicole and I have completed final notes more or less and were hoping to begin our section drawing but don't have time. Instead Ed told us to begin traveling around the wall lines and soil levels to help distinguish them for when we do begin. We are going to draw / describe the eastern wall of our trench. We chose this side because ~~there are~~ MALVOLIO and RICHARD III do not show up in the Western wall.

UNIT 1 (DK)

① 0-18cm BGS ①

topsoil: dark grey to black in color, hard, very coarse and crumbly. Softer at the top, most likely due to recent precipitation.

18-30cm BGS ②

: same color and texture as above, but with inclusions. color is a bit lighter at the lower level, more grey-brown than grey-black. The inclusions are mostly small white and yellow rocks with some sherds and at least one reddish quartz-like rock.

Recent rainfall could affect soil moisture levels and consistencies

30-39cm BGS (3)

: lighter brown in color but still of the grey ~~persuasion~~ persuasion. Less inclusions than the layer above, but still has the occasional rock or sherd. The soil is much harder to poke with a trowel and comes off the wall in small pieces or dust rather than clumps. It is still very coarse and hard.

39-44cm BGS (4)

: A dense layer of inclusions in pretty much the same soil color and ~~texture~~ ^{texture} as above layer. These inclusions consist of the small white and yellow rocks, some hard clay-red rocks, and the occasional sherd. Although this layer is not completely consistent throughout the whole meter, it is still evidently a layer.

44-49cm BGS (5)

: A richer brown, more moist and softer than above layers. Very few inclusions - small white and yellow rocks along with a few sherds. Coheres in clumps when pried from wall.

49-52cm BGS (6)

: dark, rich brown, very moist, sterile clay

18-FEB-2004, Micha Pino

PO4-62-33

construction units in relation to soil levels as we defined them (1-6)

<u>unit</u>	<u>location</u>	<u>soil layers</u>
<u>PROSPERO</u>	202DX EU 2	level 3 - level 5
<u>MALVOLIO</u>	202DX EU 3	level 2 - level 2
<u>VIOLA</u>	202DX EU 3/4	level 1 - level 3
<u>DUNCAN</u>	202DX EU 4	level 1 - level 1
<u>IAGO</u>	202DX EU 4	level 1 - level 1
<u>RICHARD III</u>	202DX EU 5	level 2 - level 3
<u>SLEEPY</u>	202DL EU 5	level 1 - level 4
<u>SNEEZY</u>	202DL EU 2	level 1 - level 4

* NOTE: on the southern side of structure 66 the soil changes dramatically from the northern side. Layers 2-5 are rich in inclusions ranging from small white, yellow, and red rocks to sherds and chert. The clay in layer 6 is red and yellow and much more malleable than in the northern side.

25 FEB-2004, MICHA PINO

P04-62-34

This is my first day back in a while due to neck pain. I need to set up a lateral trench and begin digging around the building. Ed wants me to follow out the walls towards the center of the building - ~~DUNCAN, Ed, and Richard~~, VIOA, and MALVOLIO.

202 EK /001 EU 1

32 cm BDP from NE corner - 52 cm BDP
0-20 cm BGs

I have asked Chabelo and Ruben to dig down 10 cm to start. We are looking to follow VIOA.

SOIL COLORS (refer back to P04-62-31/32)

#s match previous descriptions on POT-62-31 and -32	① topsoil	(A)	4/1 dark grey, Hue 2.5Y
	② and ③	(B)	4/1 dark grey, Hue 7.5YR
	② and ③	(G)	6/1 grey, Hue 5Y
	④ ⑤ ⑥	(D)	4/2 dark greyish brown 10YR
	⑥	(E)	4/3 brown 10YR
	④ and ⑤	(C)	4/2 brown 7.5YR
	⑥	(E)	4/3 brown 10YR
	(red)	(H)	4/4 reddish brown 2.5YR

7-Mar-2004, Micho Pino

PO4-62-34B

All previous notes involving soil layers need to be ignored. Nicole and I have redefined our layers and colors.

A) 2.5Y 4/1 DARK GREY

↳ Very coarse, dry, crumbly topsoil

B) 7.5YR 4/1 DARK GREY

↳ Very coarse, hard soil with inclusion layer consisting of small rocks and a few sherds. Soil turns to dust when poked with trowel rather than clumps.

C) 7.5YR 4/2 BROWN

↳ Soil a bit softer and more moist than those above, but still relatively hard and crumbly. Layer includes dense inclusions consisting mostly of small rocks with the occasional sherd.

D) 10YR 4/2 DARK GREYISH BROWN

↳ Similar texture and inclusion rate as layer C.

E) 10YR 4/3 BROWN

↳ Soil is much more moist and has clay-like properties. Soil is sterile.

7-Mar-2004, Micha PIMO

PD-62-34C

F) 5Y 6/1 DARK GREY

↳ Hard, dry, coarse soil with some inclusions. Most inclusions are small rocks but some shreds are present. This different color layer is only found in one section of the axial trench, leading from PROSPERO to MALVUO.

G) 2.5YR 4/4 REDDISH BROWN

↳ Hard, tightly packed, moist red clay layer. Completely sterile, only found in axial trench at the base of SNEEZY.

25-FEB-2004, MICHA PIND

PD4-62-35

202EK/001 EU 1

We have uncovered more of VIOLA and need to move on to EU 2.

In the process of moving a rock pile we found a scorpion and Don Ruben killed it. Ick.

202EK/002 EU 2

30 cm - 50 cm BDP from NE corner
0-20 cm BGS

We have moved westward into EU 2.

I am going to have them dig down 20 cm again because the soil here is fairly sterile.

Chabelo found a large stone which is part of a grinding stone that has been broken.

One of Nicole's workers cut his finger on obsidian but refused Neosporin and a bandaid. He seemed afraid to use our Western medicine. Fortunately his cut is not bad. Nevermind, we put the bandaid on.

They have found another wall running north-southish. I think it is from the next building over.

25-FEB-2004, MICHA PINO

PD4-62-36

202EH/002 EU 2

THIS new feature will be named
OTHELLO.

202EH/003 EU 1 and 2

40-40 cm BGs, 30-50 cm BDP from
NE corner

THIS ~~area~~ lot is about 30 cm wide
and 2 meters long. It runs at
the base (northern side) of Viola.

The guys have found a perfect
grinding stone. It measures 20 cm
across and has an extremely flat,
well used underside. It is also in
complete form and has not been broken.

25-FEB-2004, Micha Pino

POA-62-37

202EL/001 EUI

48-~~58~~ cm BDP from NE corner

0-10 cm BGS

We have started to dig on the eastern side of the DKIDL trench. Nicole and I figured out some of the soil layers but will have to continue tomorrow morning.

26-FEB-2004, MICHA PINO

POA-62-37

Nicole and I have finished the soil layers and colors. Chabelo isn't here because "Sporty Spice" got a flat tire.

It is also raining so we are all sitting under our little house the guys made yesterday. This is turning out to be a very weird day!

Oh, Pat says it's time to pack up and go! Oh well. Tomorrow we go to Capán!

1-MAR-2004, Micha Pino

P04-62-38

202EL/001 EU 1

The guys are working on the first 10cm of this lot. Chabelo has found part of another mano, which also appears to be well-used.

202EL/002 EU 1

58-68 cm BDP from NE corner
10-20 cm BGS

It appears that MAWOLLO may actually consist of 2 rocks. We will see for sure in the next lot. We have found some obsidian, but nothing too unusual or noteworthy.

202EL/003 EU 1

68-78 cm BDP from NE corner
20-30 cm BGS

This lot is mostly just to clarify the edges of MAWOLLO and VIOLA. We haven't been uncovering many sherds in these lots. We are going to move on to EU 2 to begin lot 004.

1-MAR-2004, MICHA PINO

PO4-62-39

202EL/004 EU 2

62-~~80~~ cm BGS from NE corner

0-18 cm BGS

We have moved on to EU 2. I think VIOLA will extend out at least one more meter.

I am moving on to EU 3, but we had to move the datum up 30cm to avoid hitting rocks. It is in the same location, but 30cm higher than before. We found a matate leg too!

measurement
from orig. datum
(new)
-30

3-MAR-2004, MICHA PINO

PO4-62-39

202EL/005 EU 3

100-180 cm BDP from NE corner (new DP)

0-10 cm BGS

70-80

Chabelo is very sick and was not supposed to come out today, but of course he showed up. We sent him down to the river to "count rocks" so that he will be in the shade.

I got another worker, Jorge, who happens to be Don Ruben's son, which should be interesting. I will get two more workers when Lara is done with them.

Chabelo came up to sit under the house and I feel better that he's where we can see him. He seems really ill.

3-MAR-2004, MICHA PINO

POA-62-40

Once Lara's workers come over I will have them begin subop EW. This subop will be just south of EL and will uncover more of DUNCAN and IAGO.

20ZEL/005 EU 3

Don. Ruben found a small object that may either be part of a figurine or orcharina, or a small bowl or incense burner with legs. I'm going to bag it separately in order to preserve some of the soil that is inside it. It is about 4 cm in length at the widest part and also about 4cm in diameter. They also found a large, beautiful obsidian blade which could have been a spearhead.

3-MAR-2004, Micha Pino

PO4-62-41

202EW/001

EU 1

11-46 40-76 cm BDP from NE corner

0-35 cm BGS (only part above VIOLA)

This lot is dug by my new workers. They are starting to uncover more of DUNCAN and INFO.

This lot is deep over VIOLA but is not nearly as deep at the summit.

202EY/001 EU 1

58-64 88-94 cm BDP from NE corner

0-6 cm BGS

This lot turns the corner of VIOLA and is adjacent to 202EL ~~100~~ EU 3. The new feature in the subop 202EY will be named ~~SHYLOCK~~ SHYLOCK.

3-MAR-2004, Micha Pino

P04-62-42

154-64 ^Y 202EW/002 EU 2
84~~79~~-94 cm BDP from NE corner
0-10 cm BGS

This unit is to the ^{South} ~~East~~ of EU 1
and is following ~~SHYLOCK~~ SHYLOCK.

9-40 202EW/002 EU 2
39~~81~~-70 cm BDP from NE corner
0-31 cm BGS
New
guys
~~XX~~

This unit is to the East of EU 1
and is following VIOLA and DUNCAN.
A substantial amount of carbon
has been recovered at about 52cm
BDP, about 13 cm BGS.
This unit appears to be 31cm deep
but this is not the whole unit,
just at the NE corner.
We have found three more features.

3-MAR-2004, MUMA PIMO

P04-62-43

43-48

202EW/003, EU 3
73-78 cm BDP from NE corner
0-5 cm BGS

This lot is what is left over between 202EW ~~100~~ unit 2 and 202EY, EU 1. It is only about 45-50 cm in length.

In lot EW 001 DUNCAN appears to stop and move south, but with 2 rocks at a higher altitude. This new feature is called DESDEMONA.

About 5 cm East of DESDEMONA a new feature appears. The rocks moving south will be named MACBETH and the rocks moving East will be ROSALIND.

4-MAR-2004, Micha Pino

PO4-62-44

202EY/003 EU 3

50-60

80-90 cm BDP from NE corner
0-10 cm BGS

This lot is a bit larger than one meter² because it connects 202EY ~~EU~~ EU 2 and 202EQ EU 5. This lot should uncover all of SHYLOCK.

SHYLOCK seems to stop midway through the structure. I think that perhaps half of the wall has tumbled, but I can't be sure.

202EK/004 EU 2

-cleaning lot about 20cm BGS

This small lot is intended to clear around VIOLET and SNOW WHITE to distinguish the corner.

202EL/006 EU 4

120-128

cm BDP from NE corner

90-98

0-8 cm BGS

We are extending subop EL eastward in order to help clarify features from the tumble.

4-MAR-2004, MICHA PINO

PO4-62-45

During the site tour the guys cleared off the rocks on the northern and eastern sides of Str. 66. I have noticed that the structure I called SHYLOCK is actually about 20 cm east of the rock labeled SHYLOCK. This rock, which is a corner piece, is either the corner of that wall or one behind it. Because I find it unlikely that four large rocks all slipped away from the corner together and still aligned, I believe it is a separate wall. This feature will be named FOOL. Tomorrow we will pull out more rocks that have tumbled in order to uncover more of SHYLOCK and FOOL.

5-MAR-2004, MICHA PIND

PD4-62-46

202EY/004 EU 2 + 3

- clearing tumble and dirt from these units to help define features such as SHYLOCK and FOOL.

- About 10-16 cm BG's

202FA/001 EU 1

85-98

115-128 cm BDP from NE corner

0-13 cm BG's

This new subop is extending north-south, parallel to subop EY. It is just east of EY, and follows a lower line of rocks that could be a terrace structure. We found a very well-worn smoothing rock ~~and~~ a pot - almost complete - see PD4-62-48

202EY/005 EU 3

66-80

96-110 cm BDP from NE corner

16-30 cm BG's

Ed and Pat have advised me to continue digging deeper in EU 3 now that SHYLOCK and FOOL are more defined. We are hoping to find the corner of SHYLOCK and SLEEPY and the southern wall of FOOL which appears to be a patio.

5-MAR-2004, Micha PINO

POA-62-47

202EY/005 EU 3

Chabelo and Don Ruben have finished digging this lot, and have revealed a rock that is in place but seems to be disconnected with FOOL. I believe that it is possibly a step that leads up to FOOL. When Pat and Ed come back I will ask if I should give it its own name.

~~202EY/005~~

5-MAR-2004, Micha Pino

PO4-62-48

202FA/001 EU 1

We have found a partial pot in the eastern side of lot 001. I am going to take some photos and then measure it.

Pot Mash lot: 202FA/002 EU 1

75

105 cm at the top of the rim

95

125 cm at the base

22 cm across at the widest part

13 cm across from what we have

salvaged from about the middle of the bowl to the edge

It is ~~168~~ 168 cm

east of SHYLOCK

and 23 cm away from the

eastern wall of 202FA EU 1.

I am including a soil sample in my lot bag.

5-MAR-2004, MICHA PINO

PO# 62-49

202EX/006

This small wall cleaning lot is in EU 1 and mostly is to clear up some tumble and try to further define FOOL and SHYLOCK.

202FA/003 EU 2

78-93

108-123 cm BDP from NE corner
0-15 cm BGS

This lot is south of EU 1 and is continuing along a possible rock line. <

8-MAR-2004 I have a new crew and I am going to have them start on PROSPERO.

202FE/001

35-50

65-80 cm BDP from NE corner
0-15 cm BGS

Only a few sherds and a piece of bayaregue came out of this lot.

8-MAR-2004, MICHA PINO

PO4-62-50

202 FE/002 EU 1
50-70 80-100 cm BDP from NE corner
15-35 cm BGS

This lot is going to extend down until we hit PROSPERO. We have extracted a substantial amount of sherds as well as some bajareque and obsidian.

202 FA/004 EU 3
83-93 113 cm - 123 cm BDP from NE corner
0-10 cm BGS

This large lot will connect FA subop to subop EF.

Pat and Ed came over and we poked around DUNCAN a bit and it turns out that DUNCAN is deeper than we thought. Our idea is that DUNCAN is contemporary with SLEEPY, and that VIOLA was a later addition.

202 FE/003 EU 1
70-78 100-108 cm BDP from SE corner
35-43 cm BGS

We are digging in front of PROSPERO to uncover the base of the wall.

8-MAR-2004, MICHA PINO

PO4-62-51

202EY/006 EU 1
~about 10 cm BGS

This lot going back to EU 1 in
subop EY is to help define the
northern edge of FOOL.

They found a stamp!

202

202FE/004 EU 2
68-90 cm BDP from NE corner
0-22 cm BGS

10-MAR-2004, MICHA PINO

202FJ/001 EU 1
30-62 cm BDP from NE corner
0-32 cm BGS

Chabelo and Don Ruben have begun digging
on top of the summit.

It seems that RICHARD III does extend
further east, and is two courses deep
in at least one place (where the top
rock is worn and flat but loose, there
is another rock directly beneath it).

10-MAR-2004, Micha PINO

PO4-62-52

202FE/005 EU 2

60-85

90-115 cm BDP from NE corner

22-47 cm BGS

I looks as though PROSPERO has some inset corners according to lots 004 and 005. lot 005 is the southern $\frac{1}{2}$ of EU 2, and will hopefully expose all courses of PROSPERO.

I am going to remove some rocks in order to see how deep DUNCAN actually is.

* rocks coming out (between VIOLA and DUNCAN)

It seems that DUNCAN is two courses deep.

10-MAR-2004, MICHA PIND

P04-62-53

202FE/006, EU 3 78-96cm

~~82-100~~ cm BDP from NE corner

~~0-18cm~~ BGs

one unit west of EU 2, following PROSPERO.
It turns out that PROSPERO has been
added on to. The new feature is
MIRANDA. There is also a lone, cut
rock named PUCK.

202FJ/001 EU 1

Chabelo found a shaped polished stone.
It is marble-looking, with blue-green
specks.

10-MAR-2004, MICHA PIND

PD4-62-54

202FE/007 EU 4

40-60 ~~80~~ 70-90cm BDP from NE corner
0-20 cm BGS

One unit north of EU 3.

We have found a pot smash but will have to work on it tomorrow.

202FJ/002

EU 2

3-32 33-62 cm BDP from NE corner
0-29 cm BGS

One unit east of EU 1, hoping to uncover more of RICHARD III.

11-MAR-2004

202FE/008 EU 4

POTSMASH

50 80cm BDP at highest point

64 94cm BDP at lowest point

43cm wide at diameter

~14cm tall

155cm from west edge of PROSPERO

35cm from west edge of MIRANDA

11-MAR-2004, Michael Piro

PO4-62-55

202FJ/003 EU 3

28-46 cm BDP from NE corner

0-18 cm BGS

This unit is south of Unit 1 and will hopefully reveal more summit architecture.

see photo
for better
clarity

(carbon at
about 64 cm
B orig. DP)

202FJ/004 EU 3

46cm BDP from NE corner - 59cm BDP

18-31 cm BGS

Continuing on the summit

202FE/008

Upon excavating most of the pot larn finding that there seems to be a smaller broken pot inside, along with obsidian, chert, and other rocks.

22-MAR-2004, MICHA PINO

P04-62-56

While I was gone on Friday Nicole named some of my lines for me.

CASSIO cuts across RICHARD III on the eastern side of the summit. MERCUTIO is off the eastern side and is just south of FOOL.

QUEEN MAB is a line just west of SHYLOCK and a bit higher on the summit, and FALSTAFF is a line just west of QUEEN MAB and higher than it on the summit. FALSTAFF is on top of the southern half of CASSIO.

I need some workers to dig out the eastern side of PROSPERO but I don't have any at the moment so I am going to begin my final notes.

25-MAR-2004

The small line of rocks coming off eastward and perpendicular to Othello will be named ~~the~~ CAPULET. The large rock on the eastern side of PROSPERO at the possible entrance will be ROMEO, while the one on the west will be JULIET.

22-MAR-2004, MICHA PINO

POA-62-567

202FN/001 EU 1

72-105 cm BDP from NE corner

0-33 cm BGS

This subop is on the eastern side of the axial trench and is going to uncover more of PROSPERO. This lot is going to the top of PROSPERO, like I did on the western side.

202FN/002, EU 2

65-95 cm BDP from NE corner

0-30 cm BGS

This unit is just north of EU 1 and will uncover more of PROSPERO.

23-MAR-2004

202FN/003 EU 2

95-123 cm BDP from NE corner

30-~~25~~58 cm BGS

This lot will continue to uncover PROSPERO, and will make EU 2 level with the base of the axial trench

23-MAR-2004, MICHA PINO

PD4-62-58

202FN/004 EU 3

55-73

85-103 cm BDP from NE corner.

0-~~17~~18 cm BGS.

This unit is just east of unit 1 and will follow/uncover PROSPERO. The wall is bigger than I thought it would be. It seems as though PROSPERO originally ran down the eastern side of the building and that Miranda was an addition onto the west side.

Chabelo found a decorated pot handle.

202FN/005 EU 3

73-85

103 cm - 115 cm BDP from NE corner

18-30 cm BGS

This lot is to further define PROSPERO, which seems to end in this unit.

25-MAR-2004

Ellen noticed a stamp Don Ruben had dug up! Chabelo found a donut stone too.

25-MAR-2004, MICHA PINO

PO4-62.59

202FN/006 EU 3 4 85-112 cm BDP
0-27 cm BGS

55-82

This unit is $100 \times 80 \text{ cm}^2$ and is just east of EU 3. It appears that PROSPERO ended in EU 3 and a single line follows off PROSPERO's end. We are following this new line to uncover it. It will be named CALIBAN.

202FN/007 EU 5
78-110 cm BDP from ~~SW~~ SW corner
0-32 cm BGS

48-80

This small unit measures $50 \times 80 \text{ cm}^2$. It is just north of EU 3. The goal of this unit is to uncover the corner of PROSPERO. The western half of this lot is deeper than the rest because once we found the corner of PROSPERO it was unnecessary to dig further away.

202EL/007 EU 3
~~10-110~~ 110-120 cm BDP from NE corner
10-20 cm BGS

70-80-90

I am returning to subop EL in order to uncover the wall that corners with CALIBAN. I will call it ANTONIO.

29-MAR-2004, MICHA PIND

PO4-62-59 B

202FE/009 EU 3

96-105 cm BDP from NE corner

18-27 cm BGs

This lot is to clarify Miranda a bit more because Ed realized that Miranda and Caubán are one line that corners in FE EU 3, and PROSPERO was in addition.

CAUBAN will be the name for the 5m line, and Miranda will be the small addition that is separate from PROSPERO on the western side of the axial trench. This new wall that corners with CAUBAN on the west side will be named HAMLET. HAMLET is only visible to two rocks because it goes under 40 or so cm of soil ~~that~~ that is supporting CAPULET.

31-MAR-2004, MICHA PINO

P04-62-59C

Ed and Pat have made a hypothesis that the eastern wall of the structure corners from DUNCAN at DESDEMONA and continues across the summit under RICHARD III and corners with SLEEPY. SLEEPY has an obvious break where this corner would have been and is later extended out in the next phase. I am going to dig more on the summit in hopes of finding this eastern wall. This will be in Subop FJ.
~~202FJ/005 EU 3 eastern 2/3~~
~~58 cm - 82 cm BDP from NE corner~~
~~30 - 54 cm BGs~~

~~202FJ/005 EU 3~~

202FJ/005 EU 3 eastern 2/3

58 cm - 82 cm BDP from NE corner

30 - 54 cm BGs

We have discovered a bajareque floor feature in this unit, at the base of lot 005. This feature will be named OPHELIA. This is about 82 (52 orig. DB) cm BDP, and we have extracted carbon at the same depth, yay!!

I have pulled out some tiny pieces of possible hematite-red pigment that was also ~~extracted from a~~ found on a broken matate from lot FE/009.

28-52

31-MAR-2004, MICHA PINO

PD4-62-59D

202FJ/005 ' EU 3

We have extracted More Carbon at the same level of 52 cm ~~BB~~ below the original Datum only this Carbon was along the eastern wall of the lot while the previous carbon was found in the North-east corner.

202FJ/006 ~~XXXX~~ Western 1/3 of EU 3

23-35

53 - 65 cm BDP from NE corner
30 - 52 cm BGS

This lot is going to remove the remaining 1/3 of EU 3 to 5cm, before ~~the floor~~ OPTELIA. Pat wants the last 5cm to be in a separate lot because ~~XXXX~~ shreds that come out of that lot were likely resting on the floor.

1-APR-2004

202FJ/007 Western 1/3 of EU 3, last 3cm to floor
65 - 72 cm BDP from NE corner
52 - 59 cm BGS

35-42

We are collecting this lot separately to save any shreds that might have rested on OPTELIA.

Carbon at 67cm BDP, 37 Bony DP, 54cm BGS

1-APR-2004, MICHA PINO

PD4-62-59E

I have uncovered 124 cm of OPHELIA in FJ ev. 3 going North-south and 118cm going east-west. Small sections also appear in the axial trench as well, and we hypothesize that the floor runs from the back of QUEEN MAB under FALSTAFF, to the back of DUNCAN under RICHARD III, and to the back of DINGLEHOPPER. It also stops at the back of SLEEPY.

~~We cannot find the original eastern wall and hypothesize that it is either deeper under OPHELIA or was removed during the next construction phase.~~

OPHELIA is about 12cm below the base of RICHARD III, and in this 12 cm of dirt there is a layer of very fine light dirt about 7cm high. Above this is a thin charcoal-like light grey streak followed by more fine dirt. This could suggest a more recent use-wear floor.

We hypothesize that QUEEN MAB was the original eastern wall on the summit, cornering with DUNCAN at DESDEMONA.

29-MAR-2004, Micha Pino

PO4-62-60

We haven't worked since Thursday due to rain, but my half of structure 66 is finally complete (I think).

Today I am going to work more on final notes and draw a sketch of my walls from an aerial view.

(length x width x height)

e2a 43
west 1/3

2-APP-2004, MICHA PINO

POA-62-63B

Phase 1
CAUBAN
HAMLET

ANTONIO - corner piece of CAUBAN / ANTONIO
junction missing
↳ rest of original walls under others

Phase 2
Add PROSPERO

Phase 3
Add MIRANDA

Phase 4

DUNCAN = N wall

↳ corners with BLUE LAGOON

(Add burnt clay
floor on summit
OPHELIA)

Added DINGLEHOPPER extension - possible shelf

B.L. corners with SEBASTIAN

(SEB) ↳ interdigitates with SLEEPY

SLEEPY has unexplained break - probably due to
suppage b/c corner slipped over 2 pof

↳ SEB interdigitates with, QUEEN MAB

↳ QUEEN MAB corners with ROSALIND

Phase 5

Add RICHARD III in summit... bench!?

Add MIRROR, MIRROR, HAPPY, BASHFUL, possible
early terrace/patio on west side

= HAPPY / BASHFUL interdigitate

2-APR-2004, Micha PIND

POA-62-63C

Phase 6

- Add VIOLA out from DUNCAN
- Add MALVOLVO out from VIOLA
- Bury BLUE LAGOON, add ARIEL on top
more westward to increase summit space
- Add DOC west of ARIEL - KING TRITON, SNOW WHITE too
- DOC ~~is~~ interdigitates with DOPEY (bury MIRROR, MIRROR)
- ↳ odd gap btwn DOPEY and STEEPY
- Build STEEPY up higher, extend out eastward
- ↳ corners with SHYLOCK
- SHYLOCK corners with VIOLA
- Add PALSTAFF and CASSIO on summit
- ↳ decreases summit space - possible bench or shelf?
- DOC and DOPEY cover HAPPY/BASHFUL
- ↳ partially exposed on west and south edges - either buried or exposed simultaneously
- Add LAGO on top of VIOLA to increase summit height a bit

Phase 7

- Add odd porch-like structures POOL and MERUTIO off eastern side
- Add 3 terraces downhill: FLOATSAM, JETSAM, LITTLE MERMAID
- Add GRUMPY on west side to connect #67
- Add cobble surface of FLOUNDER on south side

Final Notes Write-Up Str. 66

Pre-construction soils from structure 66 of site 202, Las Canoas include a layer of hard, crumbly, dark soil with some inclusions of rocks. The color for this layer is 10YR 4/2 DARK GREYISH BROWN. It is allotted the letter "D" in the section drawing of subop's DK and DL. Below this layer is a moister, sterile layer with clay properties. This layer, which is allotted "E" in the section drawing, is 10YR 4/3 BROWN. In the south end of the building, in supop DL is one final pre-construction layer. This layer is red clay and is very hard, tightly packed, and sterile. This layer, which is found at the base of SNEEZY, is allotted the letter "G" and is 2.5YR 4/4 REDDISH BROWN.

The earliest time span of structure 66 of site 202, Las Canoas, included the construction and use of CALIBAN, HAMLET, and ANTONIO on the northern side of the building. No other walls for this time span were identified due to modification. CALIBAN interdigitates with HAMLET and seems that it would also interdigitate with ANTONIO, but the corner piece of this junction is missing. The original length north to south of the building cannot be identified, but since CALIBAN measures five meters we can deduce that the basal wall running east to west on the southern side of the building would have been the same. CALIBAN, HAMLET, and ANTONIO are all one course high and constructed mostly out of rounded river cobbles. This original structure was oriented 300 degrees. Soil levels associated with this time span include "C" on the section drawing. Soil level "C" is relatively hard and crumbly and includes some inclusions. The color is 7.5YR 4/2 BROWN.

The second and third time spans for this construction phase occurred with little lapse and the additions were used contemporarily with the original structure from the first time span. PROSPERO is the first addition to this structure and comprises all that I have uncovered of time span two. PROSPERO is a platform that abuts part of CALIBAN. PROSPERO is 2.2 meters long and about .6 meters in width. Like CALIBAN, PROSPERO is also oriented 300 degrees and consists of rounded river cobbles, and ranges from one to two courses.

The third time span consists of MIRANDA, which is an addition similar to PROSPERO but smaller. MIRANDA is just west of PROSPERO, and also abuts CALIBAN. It does not however, abut PROSPERO but instead is spaced just a few centimeters away. MIRANDA measures 1.17 meters in length and between .33 and .36 meters in width. It is oriented 296 degrees and consists of one to two courses of 50% rounded river cobbles and 50% modified stone. Both the second and third time spans involve the same soil levels as the first time span.

The fourth time span occurs after a long time lapse and the constructions from the three previous time spans are no longer in use, having been naturally buried. The structure built in time span four measured 3.63 meters squared and was oriented 298 degrees. The basal walls of this construction consist of SLEEPY, SEBASTIAN, BLUE LAGOON, DUNCAN, ROSALIND, and QUEEN MAB. SLEEPY is 3.63 meters long, is between four and five courses high, and is composed of cobble, tuff, and vesicular basalt. There is an unexplained break in SLEEPY that is likely due to the end of the wall

slipping south and east due to deterioration. There is a jar stuck under this corner of the wall that demonstrates how the wall slipped in this fashion, trapping the jar beneath it.

SLEEPY interdigitates with SEBASTIAN, which corners and becomes part of the western wall of the structure. SEBASTIAN's uncovered length is .77 meters, and would have been connected to BLUE LAGOON, which has an exposed length of .40 meters. SEBASTIAN is exposed to four courses, while BLUE LAGOON is exposed to one. It is likely that SEBASTIAN runs under a later addition (ARIEL) and corners with DUNCAN on the northwest corner. BLUE LAGOON is possibly one exposed section of SEBASTIAN. This hypothesis could not be tested without destroying the later addition of ARIEL.

DUNCAN is the northern wall running east to west and is exposed at 1.4 meters. Its actual length is undefined due to possible late additions on its surface. DUNCAN most likely extends the length of the building and corners with ROSALIND in the east. DUNCAN is one to two courses high and consists of rounded river cobbles. ROSALIND interdigitates with DUNCAN at its first course and continues two courses above DUNCAN. ROSALIND extends south 1.02 meters and in line with, but not connected to, QUEEN MAB. QUEEN MAB is two to three courses high and 3.7 meters in length, and consists of 70% basalt and 30% rounded river cobbles. It corners with SLEEPY in the southeast corner.

The summit room contained by these basal walls seemed to have contained a stone shelf (DINGLEHOPPER). DINGLEHOPPER measures 1.64 meters in length, one

course wide ranging from .18 to .29 meter in width, and .12 to .39 meter in height. The western face of SEBASTIAN abuts with BLUE LAGOON.

The floor of this summit room was covered by a burnt clay surface called OPHELIA. OPHELIA covers the entire floor, running under the later addition of FALSTAFF on the east and likely hitting the base of QUEEN MAB. It runs to the base of DINGLEHOPPER, suggesting that it was laid after DINGLEHOPPER was constructed. OPHELIA runs to the SLEEPY on the south and DUNCAN on the north. This surface is well preserved in the southeast corner where it was likely burnt for a longer period of time or more often, while the other areas to the west and north are softer and more deteriorated. The soil layers that are associated with the fourth time phase include "B" and "F" on the section drawing. Layer "B" is a very course, hard, fine soil with a layer of inclusions including some sherds. It's color is 7.5YR 4/1 DARK GREY. Layer "F" is a layer that only appears to the south of PROSPERO and leads up to the fifth time span addition of MALVOLIO, a step. I hypothesize that since this soil existed when MALVOLIO was added, it had to have been present when the fourth time span occurred. Layer "F" is a hard, dry, course soil with small inclusions of rocks and the occasional sherd. Its color is 5Y 6/1 DARK GREY.

The fifth time span of structure 66 includes the addition of a stone bench in the summit room constructed in time span four, as well as an extension of the structure to the west. The bench, RICHARD III, was placed in after the floor surface OPHELIA had been filled over. RICHARD III is 1.93 meters in length, and ranges from .37 to .5 meters

in width. It is oriented 290 degrees, which makes it non-parallel to the basal walls.

RICHARD III is one to two courses deep and two courses wide.

To the west of the basal wall SEBASTIAN an extension was added at a deeper level in the stratigraphy. These additions included HAPPY, which has 1 course and extends .86 meter in length until it interdigitates with BASHFUL, which extends 1.63 meters to the north and also consists of 1 course. There is a more recent construction feature limiting the exposition of BASHFUL, but on the other side of this addition another wall that is called MIRROR, MIRROR has been exposed. MIRROR, MIRROR is probably connected to BASHFUL, and runs 1.47 meters to the north. MIRROR, MIRROR is 1 to 2 courses high. There does not appear to be a wall on the north side connecting DUNCAN to MIRROR, MIRROR, but it could just be unexposed.

The sixth time span was the phase in which most of the construction on this structure took place. Although the original summit room is left intact, it is greatly modified. RICHARD III and DINGLEHOPPER are buried. SLEEPY remains the basal wall in the south, but is elongated to 2.85 meters and raised up a few courses. To the west HAPPY and BASHFUL are covered and replaced by DOPEY and DOC respectively. DOPEY runs as HAPPY did, to the west for .82 meter and interdigitates with DOC, which follows BASHFUL's old path to the north, for 1.98 meters. DOPEY and DOC are each one course high.

To the west, BLUE LAGOON and SEBASTIAN are replaced with ARIEL, which was built on top of SEBASTIAN, as the basal wall. ARIEL appears to fall short of

SLEEPY in the south, but this could be due to poor preservation. ARIEL measures 2.76 meters and is 1 to 2 courses high. Just below and to the west of ARIEL is a small wall named SCUTTLE which is 1.08 meters in length and consists of one course of small, round river cobble. SCUTTLE lines up with the north end of DOC but ends midway through the length of DOC.

Parallel to ARIEL starting at its northern end and running just below and to the west is KING TRITON. KING TRITON is 1.03 meters in length and 1 course consisting of 3 large, flat, cut blocks. Just west of KING TRITON at the same depth lies SNOW WHITE. SNOW WHITE is comprised of 1 to 2 courses and runs 1.42 meters, interdigitating with DOC to the south. SNOW WHITE was constructed above MIRROR, MIRROR, which was probably covered naturally or artificially by dirt. This was hypothesized because a small level of dirt was found between the two walls during excavation.

To the north DUNCAN is still in use, but is joined by a longer wall further north called VIOLA. VIOLA is 4.45 meters in length and comprises the whole north side of the structure. VIOLA and DUNCAN are used contemporarily because DUNCAN provides a natural step up from VIOLA.

Below VIOLA to the north is a cut stone block called MALVOLIO. MALVOLIO is a step up to VIOLA, and measures .86 meter in length, is exposed to .2-.34 meter in width, and is about .1 meter thick. IAGO, a small, flimsy, one-course addition was added on top of DUNCAN in this time phase. IAGO measures .89 meters

in length and is only about .1 meter in width. IAGO was apparently meant to increase the height of the summit room to a small degree.

To the east another wall has been added to increase the outer area of the structure, in the same way that VIOLA was added. The wall to the east, SHYLOCK, measures 4.1 meters and extends all the way from VIOLA to the new addition of SLEEPY.

SHYLOCK consists of one to two courses and is aligned to 204 degrees. Interestingly, SHYLOCK is constructed of mostly large cut blocks of basalt, some which have pumice inclusions. This side of the structure is above the river at the edge of the hill, so these blocks could have been used to help maintain the structure's integrity as well as impress those walking up to the site from the river.

The room on the summit was decreased in area on the eastern side during the sixth time phase. Two additions, FALSTAFF and CASSIO, were placed on the west of QUEEN MAB. FALSTAFF abuts SLEEPY in the south, and extends north 1.4 meters. It is three courses high and about .2 to .5 meter thick, with a height of .28 to .36 meter. To the north of FALSTAFF is CASSIO, which is a small addition built over the eastern edge of RICHARD III. CASSIO is 1 meter in length and 1 to 2 courses high. It is much lower than FALSTAFF, with only about .10 meter in height.

Few changes were made in the seventh and final time phase for structure 66. To the east, a porch-like feature consisting of two lines of cut tuff blocks were added. FOOL abuts SHYLOCK and is 1.16 meters in length. MERCUTIO is just east of FOOL and

runs 1.44 meters. This addition could have been added to help SHYLOCK from slipping, or could have been a kind of patio.

Further east, on the slope of the hill, are three terraces that have been added. FLOATSAM is furthest west and measures 3.07 meters. Just east of this terrace lies JETSAM, which measures 3.24 meters. The longest terrace, just east of JETSAM, is LITTLE MERMAID measuring at least 2.20 meters and possibly extends to 3.71 meters. These terraces were likely added to keep the hill from eroding and causing the structure to slip down to the east.

On the south side of the structure a large cobble surface named FLOUNDER was added that runs between structure 66 and Nicole's structure. FLOUNDER begins around the south side of FOOL and MERCUTIO and wraps around SLEEPY to the south. It possibly continues the length of SLEEPY, but some of the surface has been dug through. On the west of the building a small walkway between structure 66 and 67 was placed. This wall, GRUMPY, which runs east to west, measures about half a meter in length and is 2 courses high. GRUMPY is oriented 296 degrees. OTHELLO is another possible walkway further down to the north, but on excavation of structure 67 it appears that this may just be tumble.

Post-construction of structure 66 involves a natural burial of the structure by soil level "A" on the section drawing. Layer "A" is a dark, dry, very coarse topsoil with the color 2.5Y 4/1 DARK GREY.

PA-62-64

SIR-67

~~202FY/001 EU 1~~

1 m beginning str. 67 with an axial trench 8 m long and $\frac{1}{2}$ of a biaxial trench on the western side of the structure 5 m long. The subop for the southern 4 m of the axial trench will be FY. FZ will be the northern 4 m, and GA will be the ~~1~~ biaxial trench. My datum is anchored in at 30 cm above the ground level at the summit.

202FZ/001 EU 1

80-91 cm BDP from NE corner

0-11 cm BGS

EMPTY LOT, at northern most unit of axial trench

202FY/001 EU 1

55-75 cm BDP from NE corner

0-20 cm BGS

This lot is in EU 1 of the southern $\frac{1}{2}$ of the axial trench.

202GA/001 EU 1

65-75 cm BDP from NE corner

0-10 cm BGS

First unit on the biaxial trench, west side.

2-APR-2004, MICHA PINO

PO4-62-65

202FZ/002 EU 1

91-100 cm BDP from NE corner

11-20 cm BGS

EMPTY LOT in EU 1 at most northern side
of axial trench.

202FZ/003 EU 1

100-108 cm BDP from NE corner

20-28 cm BGS

Northern most unit in axial trench.

202FY/002 EU 1

75-86 cm BDP from NE corner

20-31 cm BGS

Southern most unit in axial trench.

202GA/002 EU 1

75-85 cm BDP from NE corner

10-20 cm BGS

EU 1 on western most side of biaxial trench.

2-APR-2004, MICHA PIND

PO4-62-66

202FY/003 EU 2

38-60 cm BDP from NE corner

0-22 cm BGS

EU 2, just north of EU 1, on the southern side of axial trench. (Uphill, so north is deeper than south)

202FZ/004 EU 2

70-105 cm BDP from NE corner

0-35 cm BGS

Dirt is very fine, dark grey, lots of tumble, few sherds

202FY/004 EU 2

60-72 cm BDP from NE corner

22-34 cm BGS

Hard, coarse soil with lots of inclusions
low sherd count

202GA/003 EU 1

85-90 cm BDP from NE corner

20-25 cm BGS

the western end of the biaxial trench is loaded with sherds, including some large pieces.

202FY/005 EU 2

72-~~82~~87 cm BDP from NE corner

34-~~44~~49 cm BGS

Wall clearing/defining lot, mostly southern half of unit 2.

This wall will be named ATTICUS.

2-APR-2004, MICHA PIND

PO4-62-67

202FZ/004 EU 2

A wall has been discovered here on the northern side of the structure. It will be called SCOUT.

~~202FY/006 EU 2~~

~~82-~~

~~cm BDP from NE corner (out south of ATTICUS)~~

~~44-~~

~~cm BGS~~

~~This lot is only about 70cm long, south of ATTICUS. I hope to find the base.~~

202FZ/005 EU 2

105-128

cm BDP from NE corner

35-38

cm BGS

This small lot is about 40cm in length, just north of SCOUT. I hope to find the base.

202GA/004 EU 1

90-100

cm BDP from NE corner

25-35

cm BGS

lots of sherds

202FY/006 EU 3

30-56

cm BDP from NE corner

0-26

cm BGS

deep lot to top of ATTICUS.

5-APR-2004, MICHA PINO

PO4-62-68

202GA/005 EU 1

100-108 cm BDP from NE corner

35-43 cm BGS

I am continuing down in this excavation unit because there are still more sherds being dug up.

It seems I only have 2 sets of workers today, but Chabelo and Don Ruben are fast workers so it shouldn't be a problem. They found 2 sherds that fit together with an odd hole in the middle.

T Ed said it was 5cm part of a censor bottom.

202FY/007 EU ~~3~~ 4

32-40 cm BDP from NE corner

0-8 cm BGS

This unit is on the north side of EU ~~3~~ and is on the summit.

We have found another wall that will be named JEM.

5-APR-2004, MICHA PINO

POA-62-69

202FY/008 EU 4

40-45 cm BDP from NE corner

8-13 cm BGS

We have hit some rocks and I can't tell if it's a wall or floor feature or what so we will move on to FZ eu4.

202FZ/006 EU 4

43-55 cm BDP from NE corner

0-12 cm BGS

This ~~is~~ unit is just north of FY EU 4 and is on the summit.

~~202GA/006~~ 202GA/006 EU 2

52-70 cm BDP from NE corner

0-18 cm BGS

This unit is one unit east of unit 1 on the blaxial trench.

202FZ/007 EU 3

50-75 cm BDP from NE corner

0-25 cm BGS

This unit is one north of EU 4.

This ~~it~~ will go down to the top of SCOUT on the western half... there may be a line on the eastern half so that ~~the~~ half will be excavated next.

5-APR-2004, MICHA PINO

P04-62-~~E~~70

Ed is working on my section drawing of the axial trench (which is almost complete) so that ~~it~~ can extend laterally.

202GA/007 EU 3

37-72 cm BDP from NE corner

0-35 cm BGS

Just east of eu 2 on biaxial trench.

In FZ eu 3 it turns out that SCOUT is in addition to an earlier wall, CALPURNIA. ~~SCOUT~~ SCOUT corners on top of CALPURNIA with AHAB, which runs North-South under ISHMAEL.

Don Ruben and Chabelo are starting 2 new subop. GN will run east-west following ATTICUS.

202GN/001 EU 1

35-~~4~~60 cm BDP from NE corner

0-25 cm BGS.

This unit is following ATTICUS and is just west of the ~~new~~ axial trench.

shards-chert-baja-obsidian

6-APR-2004, MICHÉ PINO

PO4-62-71

202GA/008 EU 4

sherds, baja, obsidian

37-46 cm BDP from NE corner

0-9 cm BGs

This unit is just east of EU 3 and is approaching the summit.

202GN/002 EU 1

60-84 cm BDP from NE corner

sherds, baja

25-49 cm BGs

This lot is the southern 1/3 of EU 1, digging to the base of ATTICUS.

202GA/009 EU 2

sherds, baja, obsidian

70-100 cm BDP from ~~NE~~ corner (not the whole lot)

18-48 cm BGs

I am returning to EU 2 to dig around some large rocks to see if there is a line.

202GN/003 EU 2

sherds, baja, chert, smooth stone

38-~~62~~ 62 cm BDP from NE corner

0-24 cm BGs

This unit is just west of EU 1 and is continuing along ATTICUS.

~~This lot is~~

This lot is 38-62 cm BDP on top of ATTICUS and 38-70 cm BDP at the base of the wall.

6-NAR-2004, MICHIA PINO

PO4-62-72

202GN/004 EU 3

shards, chert, smooth stone

30-50 cm BDP from NE corner

0-20 cm BGS

This 50 cm unit is just north of EU 2 and just south of GA EU 4. We are following GATSBY which corners with ATTICUS in GN EU 2 and goes north-south.

202GA/010 EU 4

shards, bays, obsidian

46-80 cm BDP from NE corner

9-45 cm BGS (at deepest point at base of HOLDEN)

This lot will hopefully reveal more of GATSBY

* NOW we are uncovering HOLDEN.

202GN/005 EU 4

shards, bays, chert, shaped rocks

43-68 cm BDP from NE corner

0-25 cm BGS

This unit is on the eastern side of the axial trench and follows ~~the~~ ATTICUS out to the east.

* It turns out that in subop GN on the west side GATSBY is actually a late crappy addition. The real corner is in the same EU but about 30cm east. This wall will be named ~~XXXXXXXXXX~~ HOLDEN.

6-APR-2004, MICHA PINO

POA-62-73

202GN/006 EU 5

sherds, chert, obsidian

55-70 cm BDP from NE corner

0-15 cm BGS

This unit is one east of EU 4 and is almost touching Str. 66.

We are still following ATTICUS, and we should find the corner in this unit.

202GA/011 EU 5

sherds, chert

32-66 cm BDP from NE corner

0-34 cm BGS

This unit is the final unit in the GA subop heading east. It is on the summit.

*see next page

12-APR-2004

202GS/001 EU 1

sherds, smooth rock

43-55 cm BDP from NE corner

0-22 cm BGS

This new subop extends from the possible corner of ATTICUS northward. This unit is 1 meter by 1.3 meters in dimension.

We have found the corner. This wall running north-south will be named

HESTER ~~HESTER~~ PRYNNE

12-APR-2004, MICHA PINO

PO4-62-74

202 GS/002 EU 2

Shards, byzantine

#38 - 50 cm BDP from NE corner

0 - 12 cm BGS

This unit is just north of EU 1.

- * In Subop GA, unit 5 the guys have found a small cobble line named PEARL, upon which is resting a bigger line, named INVISIBLE MAN. These two lines run east-west. Under PEARL there seems to be either a very low wall or a floor surface. I will call this feature MOBY DICK. At the level of this feature the Sherd count has increased dramatically (the surface does not take up the whole unit).

13-APR-2004, MICHA PIND

PO4-62-75

202GS/003 EU 2

sherds, chert, peanitz

50-60 cm BDP from NE corner

12-22 cm BGS

This small lot is to identify/clarify the possible wall cornering with HESTER PRYNNE

202GA/012 EU 6

sherds, baja

30 cm - 44 cm BDP from NE corner

0-14 cm BGS

I have added the small unit connecting the axial and biaxial trench to the GA subop. We will leave the datum. They seem to have found a potsmash or partial jar in this lot but it may be embedded in JEM. Or not. Just a large sherd rim we pulled out.

202GS/004 EU 3

sherds, baja, chert

75-85 cm BDP from NE corner

0-10 cm BGS

This 1.5x1m ~~lot~~ unit is further north, not directly connected to EU 2. It will follow out both ISHMAEL and CALPURNIA to the east.

202GV /001 EU 1

sherds, baja

43-58 cm BDP from NE corner

0-15 cm BGS

This new unit/subop is to the north of the biaxial trench and follows HOLDEN.

13-APR-2004, MICHA PINO

PD4-62-76

202GS/005 EU 4 shards, baja
50-58 cm BDP from NE corner
0-8 cm BGS

This unit is south of EU 3, and connects EU 3 and EU 4. This unit is on the summit and should reveal more of ISHMAEL and any summit features.

202GA/013 EU 6 shards
Wall cleaning lot of PEARL and INVISIBLE MAN.

202FY/009 EU 4 shards
49-59 cm BDP from NE corner
13-27 cm BGS

Going back to the axial trench to define PEARL and INVISIBLE MAN, if possible.

202GS/006 EU 5 s shards, chert
58-75 cm BDP from NE corner
0-17 cm BGS

This unit is ~~west~~ east of EU 3 and EU 4, and will hopefully uncover more of OTHELLO from structure 67. The unit has a shape like this:

13-APR-2004, MICHA PINO

PM-62-77

202GN/007 EU6

sherds, chert, baja, obsidian

32-58 cm BDP from NE corner

0-26 cm BGS

This unit is just east of unit 3 and is small, like EU 3.

*put on
lithics
wishlist

202GV/002 EU 2

sherds, large round smooth stone

36-50 cm BDP from NE corner

0-14 cm BGS

This unit is a small unit just east of EU 1.

202GV/003 EU 3

sherds, smooth rocks, chert

53-65 cm BDP from NE corner

0-12 cm BGS

This unit is just south of EU 2 and will follow ~~CALPURNIA~~ ISHMAEL to the west.

202GV/004 EU 4

sherds, chert

52-65 cm BDP from NE corner

0-13 cm BGS

This unit is just north of EU 3, and will follow CALPURNIA to the west.

202GV/005 EU 5

sherds, baja, chert

53-65 cm BDP from NE corner

0-12 cm BGS

This unit is just west of EU 3, following ISHMAEL.

14-APR-2004, Micha PINO

104-62-78

Today I will work on a burial we started to uncover yesterday.

~~2026GN008 2026FY3~~

This burial will be 2026GN008 but it is in both GN EU 6 and FY EU 3.

~58 cm

BAP

~26 cm

BGS

I am going to do the best I can uncovering the skeleton.

15-APR-2004

I am still working on the dead guy. so far I have uncovered the skull and a leg or two. The bones are in terrible condition.

16-APR-2004

Today I am going to try to remove the bones as best I can, with the help of Chabelo and Don Ruben.

I have taken lots of photos of the burial. Underneath the head is a large flat rock, and a small blue-green bead. Chabelo has also found the teeth, which are in  close proximity to the bead.

1 cm - 1

The body was placed on an old floor rock surface. We found another bead a bit smaller and greener in ~~color~~ color!

16-APR-2004, MICHA PIND

PO4-62-79

Later I am going to have the guys open the box that is formed by SCOUT, on the north, AHAB on the east, ISHMAEL on the south, and a cut block I will name BOO RADLEY on the west. I will take a photo of the box before it is opened.
It is in FZ EU's 2 and 3.

20FZ/008 EU 2 + 3

83-99 cm BDP from NE corner of box
In the box we found rocks and sherds.
The dirt was full of inclusions.
The box is $28 \times 30 \text{ cm}^2$

19-APR-2004

202GV/006 EU 4

sherds, baja

~65 cm BDP

~13 cm BGS

Wall cleaning lot to help define CALPURNIA.
Seems that CALPURNIA gets a little sketchy on the west side.

19-APR-2004, MICHA PINO

POA-62-80

202GS/007 EU 6 sherds, bja
56 - 71 cm BDP from NE corner
0 - 15 cm BGS

This unit is just south of EU 5 and connects str. 66 and 67, uncovering more of GRUMPY.

The burial from last week revealed an old rock floor surface on which the body was laid. This feature will be called QUEEQUEG.

202GN/007 EU 6 EMPTY LOT
68-73 cm BDP from NE corner
0 - 5 cm BGS

This unit is west of EU 4 and north of EU 5, and should help clear some tumble from CALPURNIA.

202HX/001 EU 1 mano, sherds
45-60 cm BDP from NE corner
0-15 cm BGS

This unit is west of GN EU 2 and 3, uncovering more of the large, oddly tumbled rocks on the western side of the structure. A well-used mano has been found.

19-APR-2004, MICHA PINO

PD4-62-81

202GV/008 EU 5

sherds

65-71 cm BDP from NE corner

12-18 cm BGS

Hopefully digging more in this unit will help clarify construction features.

202GV/009 EU 6 + 4

sherds

73-90 cm BDP from NE corner

5-22 cm BGS

We are digging in front of a line to find out more about this possible feature, which may or may not be part of CALPURNIA.

202GS/008 EU 7

60-70 cm BDP from NE corner

0-10 cm BGS

This unit is just south of EU 6 and is the final unit on the south that connects Str. 66 and 67. Also in this lot I am including any sherds that are collected as we do some cleaning on the eastern side of Str. 67, looking for a basal wall.

19-APR-2004, MICHA PINO

PO4-62-82

202GS/009 EU 7 bja, sherds, chert
70-90 cm BDP from NE corner
10-30 cm BGS

We are digging in deeper to try and find the eastern basal wall.

202GS/010 EU 5 sherds, bja, obsidian
83-107 cm BDP from NE corner
25-~~49~~ cm BGS

We are also looking for the eastern basal wall here, further north on str. 67.

20-APR-2004

202GS/011 EU 1 and 2 sherds, bja, chert, obsidian
55-90 cm BDP from NE corner
22-57 cm BGS

We are moving west, still trying to ~~find~~ find the eastern basal wall.

202GS/012 EU 4 and 2 sherds, bja
58-110 cm BDP from NE corner
8-60 cm BGS

Also moving westward to find eastern basal wall.
I have extended both GS/011 and 012 to include EU 2 so we could uncover the whole wall.

little sherds,
felt that
the soil
layer was
uniform
- or to go
deep

20-APR-2004, MICH2 PINO

PCA-62-83

The wall that we have uncovered is either actually 2 walls, or one wall that steps out to the east on the southern end of the structure.

Where we dug to the north there were substantially less sherds than on the south side. I will name the wall on the south side ENDER and the one on the north ~~ENDER~~ GRENDER.

ENDER corners to the west and goes under HESTER PRYNNE.

202HX/002 EU 2

56-57 cm BDP from NE corner

0-7 cm BGS

This unit is just west of EU 1, uncovering more large tumble on the basal trench.

202FY/010 EU 3 (and part of GS EU 1) ^{swords, rags, chert, obsidian}

60-75 cm BDP from NE corner

30-45 cm BGS

We are digging down to the cobble floor (QUEERUEB) surface on which the burial was laid.

This will be a large lot, extending from ATTICUS on the south to HESTER ~~PRYNNE~~ PRYNNE on the east.

20-APR-2004, MICHA PINO

PO4-62-84

202HX/003 EU 2

Sherds, baya, obsidian

57-75 cm BDP from NE corner

7-25 cm BGs

Digging deeper to see if we have a line.

22-APR-2004

202HX/004 EU 1

Sherds, obsidian

60-70 cm BDP from NE corner

15-25 cm BGs

Digging deeper to help define a line from large tumble. Ed said it looks like this tumble is actually intentional fill but he's not quite sure why they put it there.

202GV/010 EU 1

Sherds, chert, obsidian, baya

~58 cm BDP - 120 cm BDP from NE corner

~15 cm BGs - 77 cm BGs

removing tumble to help define CALPURNIA.
and dirt

[The wall that corners with ENDER and continues west under HESTER PRYNNE will be called P1 PATEL.]

202GV/011 EU 7

55-75 cm BDP from NE corner

0-20 cm BGs

This unit is to the west of EUs 1, 5, and 6 and will hopefully help define ~~a~~ 2 western basal wall

22-APR-2004, MICHA PIND

PO4-62-85

It seems that there may be two wells on the western side.

One well, which I will call ~~XXXXXXXXXX~~

CHABELO ~~XXXXXXXXXX~~ corners in the middle of HOLDEN and extends ~~XXXXXX~~ south to corner with CALPURNIA.

202GS/013 EU 4 and 2 shards, baja, obsidian

✓ 60# cm BDP from NE corner

✓ 22# cm BGS

This lot is to clear off the dirt and tumbled rocks that are around the on-end feature on the summit. This feature will be named DON RUBEN.

202GN/012 EU1

shards

58-80 cm BDP

15-37 cm BGS

Wall cleaning lot of CHABELO and a possible line just ~~XXXXXX~~ north of INVISIBLE MAN.

202FJ/008

shards

surface cleaning lot of datum dirt left on OPHE4A in structure 66.

on top of INVISIBLE MAN is a small line coiled YONI and just north of that NIMROD corners with HOLDEN.

22-APR-2004, MICHIA PIND

POA-62-86

202GIN/009

EU 3

shards, bays, flat rock

50-70

cm BDP from NE corner

20-40

cm BGS

Digging down to reveal more of QUEEQUEG
and NOBY DICK.

23-APR-2004

Today I am going to finish excavating,
work on final notes, and take pictures of
structure 67.

There is a line that is just north of
ATTICUS on the west side that is just
on top of QUEEQUEG. It appears to abut
HOLDEN and ATTICUS, and could have been
a small shelf. I will call it BELL.

19-Apr-2004, Micha Pino

PCA-62-87

BIAXIAL TRENCH

Wall descriptions

ATTICUS

- runs east - west
- southern basal wall
- interdigitates with HOLDEN on west
- extends to GATSBY (late addition) on west
- extends and ~~interdigitates with~~ ^{is abutted by} ~~HESTER~~ HESTER PRYNNE on east (probably later addition)
- extends and interdigitates with ENDER further east

BELL

- abuts ATTICUS in east (mid ATTICUS)
- lays on top of QUEEQUEG
- abuts HOLDEN in west

QUEEQUEG

- cobble floor surface - extremely flat
- under BELL and below JEM by 30+ cm of dirt
- abuts ATTICUS in south
- peters out at end of JEM to east
- site of burial

JEM

- tallest wall
- neither abuts nor interdigitates with any walls
- 30+ cm of dirt btwn JEM and QUEEQUEG

27-APR-2004, MICHA PIND

PO4-62-94

MOBY DICK

- flat surface - either early bench or shelf
- under HOLDEN on the west and PEARL on the north

HOLDEN

- interdigitates with ~~#~~ ATTICUS on south end and extends north and interdigitates with INVISIBLE MAN, YONI, and NIMROD.
- built over PEARL and MOBY-DICK (could about b/c HOLDEN is deep)
 - ↳ built HOLDEN first, added MOBY DICK later
- ends at NIMROD in the north

PEARL

- above MOBY DICK, under INVISIBLE MAN and HOLDEN
- extends from under HOLDEN in west all the way across to corner with GRENDEL is abutted by DON RUBEN (on end feature)

INVISIBLE MAN

- short line built above PEARL (dirt btwn)
- extends from HOLDEN in the west, tapers out to the east

YONI

- small line just above INVISIBLE MAN and follows the same path

27-APR-2004, MICHA PINO

PD4-62-95

NIMROD

- ~~rough~~ slightly thicker line that shares the same path as the previous two.

GATSBY

- small 3 rock line that corners with 2 (the addition to ATTICUS runs north-south)
- probably used to be connected to CHABELO

SCHORTMAN

- huge tumble in the west either added to build up the earth or to prevent passage

CHABELO

- runs north-south
- corners midway through and under HOLDEN (one rock exposed as corner)
- extends north all the way to interdigitate with CAUPURNIA
- probably once lined up with GATSBY to form an added western wall

HESTER PRYNNE

- interdigitates with ATTICUS in the south
- extends north and abuts PEARL as it corners east with PI PATEL
- built on top of ENDER ~~is~~ (dirt btm)

ENDER

- corners with ATTICUS to the south (interdigitates)
- runs north where it interdigitates and corners in at PI PATEL
- is east of and below HESTER PRINNE

GRENDEL

- corners and interdigitates in the south at PEARL
- extends north to corner with ISHMAEL
- probably corners with CALPURNIA even farther north
- below messy cobble surface (late addition)

CALPURNIA

- oldest exposed northern basal wall
- runs from GRENDEL on the east (probably) to CHABELO on the west
- SCOUT, AHAB, and BOO RADLEY built above and a bit south of CALPURNIA.

ISHMAEL

- extends from GRENDEL in the east to CHABELO in the west
- more recent than CALPURNIA (I think!)
- built above AHAB₅ and BOO RADLEY

27 APR - 2004, MICHA PIND

PO4-62-97

SCOUT

- one rock above CALPURNIA - marks northern border of box

AHAB

- 2 1/2 exposed rocks that corners with SCOUT in the north and appears to run south under ISHMAEL
- built above CALPURNIA - east border of box

BOB RADLEY

- 1 large, broken, cut block
- corners with SCOUT in the north and extends south at least abutting or possibly extending under ISHMAEL
- forms the western border of the box

DAN RUBEN

- on end feature at the summit
- extends from ISHMAEL in the north to the summit

Final Notes Write-up Str. 67

The earliest time span of Structure 67 of site 202, Las Canoas includes the construction and use of BELL, MOBY DICK, and QUEEQUEG on the southern side of the building. No other construction features associated with this time span were uncovered due to more recent additions that were built on top of older ones. BELL is a small wall oriented 260 degrees with an uncovered length of 1.6 meters. BELL probably originally cornered to the west with MOBY DICK, which runs north-west and is comprised of two lines of cobble. MOBY DICK is exposed to 1.05 meters and was either a basal wall along with BELL or a stone bench. The last feature exposed for this time span is a cobble floor surface called QUEEQUEG. QUEEQUEG lies within the area outlined by BELL and MOBY DICK and runs further west.

The second time span of Str. 67 includes the construction and use of HOLDEN, ATTICUS, ENDER, and PI PATEL. The features from the first time span are buried and replaced by the walls listed above. HOLDEN is the western basal wall, running north-south for 2.9 meters and .45 meter high with 2-4 courses. HOLDEN corners to the south with ATTICUS, the southern basal wall that runs west-east. ATTICUS runs 4.5 meters and is .45 meters wide. It corners with ENDER in the east. ENDER runs north from the junction with ATTICUS for 1.8 meters. ENDER is a small wall with only 1-2 courses in height and .3 meter in width. ENDER corners at PI PATEL which runs east-west for a short .6 meters before the rest of the line is hidden by later renovations. Any other walls associated with the second time span are uncovered and unidentifiable due to more recent constructions impeding further excavation.

The third time span of Str. 67 was by far the busiest. While HOLDEN and ATTICUS remain in use, ENDER and PI PATEL are covered and replaced by a new wall further westward, reducing the length of ATTICUS to 3.95 meters. This new wall, HESTER PRYNNE, measures 1.86 meters. To the west of HOLDEN is a wall addition named CHABELO.

CHABELO is measured at 1.72 meters but was probably longer at one point, running the entire length of the structure from north to south. At the south it probably once cornered with GATSBY, a small corner addition that elongated ATTICUS to a small degree. CHABELO runs to the north where it corners with an impressive northern basal wall called CALPURNIA. CALPURNIA runs east-west for 4.16 meters, and is .46 meters wide. CALPURNIA is composed of 60% broken cut blocks, probably swiped from a nearby main plaza construction. CALPURNIA probably cornered in the east with GRENDAL, which is exposed to 2.37 meters. GRENDAL runs north-south and is oriented 345 degrees. GRENDAL corners with a excellently constructed and preserved wall named PEARL which is comprised mostly of tiny river cobbles.

PEARL runs the entire width of the building parallel to CALPURNIA and measures in at 4 meters. PEARL divides the summit into two rooms, one just north of it and one just south. In the room to the north of PEARL a few features were added just above CALPURNIA. These features (BOO RADLEY, SCOUT, and AHAB) form a box with a later addition (ISHMAEL) representing the southern barrier, although excavation revealed that there was nothing unique within that box. BOO RADLEY is an impressive

cut block measuring .55x.42x.10 meters. It forms the western side of this box. To the east, comprising the northern barrier is SCOUT, one round flat rock measuring .27x.20x.3 meters. Just east of SCOUT is AHAB, which is comprised of a line in which only 2 ½ rocks are exposed. This line measures in at .6 meter and appears to possibly continue under a later addition (ISHMAEL).

Also in this northern room, just east of HOLDEN are some additions that were constructed right after PEARL, as they sit just on top of that line. Just above PEARL sits INVISIBLE MAN, a short line measuring 1.2 meters long and .26 meter wide. Directly north of INVISIBLE MAN sits YONI, a poorly constructed and poorly preserved line that probably served to raise the level of the walls by a marginal degree. YONI measures .97 meter long, .15 meter wide, and .15 meter high. Just north of YONI sits NIMROD, a slightly larger line measuring 1.14 meters in length and .25 meter wide, composed of 2 courses. All three of these lines run east-west, parallel to PEARL.

At some point in the construction sequence of Str. 67 an unusual pile of huge tumbled rocks including massive rounded blocks of tuff was intentionally placed in the west. This was either intended to raise the level of the earth substantially or to prevent passage to and from the main plaza via this route.

The fourth time span consisted only of the addition of one wall, ISHMAEL, in the northern summit room. ISHMAEL runs from mid-CHABELO across to mid-GRENDEL, measuring 4.1 meters in length and sits approximately .55 meters south of CALPURNIA.

ISHMAEL sits right above BOO RADLEY and AHAB, and provides a natural step up from CALPURNIA.

The last time span of construction for Str. 67 includes only a high-sitting bench in the southern room and an on-end feature in the northern room. The bench, JEM, measures 1.75 meters in length by .6 meter in width, and does not abut any other features. In the northern room, DON RUBEN, an on-end feature, is added to the eastern 1/3 of the room. At about the same time these features were added, a burial took place. The bones were found just south of JEM, resting on the long-since buried cobble floor, QUEEQUEG. These three modifications mark the last time span of construction and use for Str. 67.
